

Hookah Maintenance

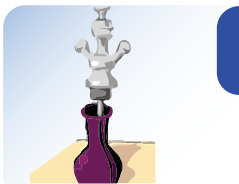

SETTING UP YOUR HOOKAH

1 Please make sure that you have a Stem Base, Snap On Tray, set of Tongs, Bowl with Bowl Grommets and Hose with Hose Grommets

2 Now fill up your Base with water, making sure that the water level reaches the bottom of the bottle neck.

3 Moisten the Base Grommet using a small amount of water

4 Place the Snap-On Tray over the top of the shaft, securing it in place

5 Place the Bowl Grommet over the top of the Shaft

6 In order to set up your Bowl, it is recommended that you have the following: Flavored Tobacco, Tongs, Metal Bowl / Tin Foil

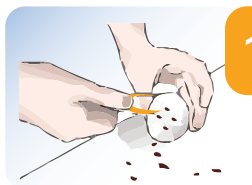

7 Break up the Flavored Tobacco in order to experience a smoother smoke

8 Loosely sprinkle Flavored Tobacco into the Bowl making sure to not fill above the top of the Bowl

9 Secure the Metal Bowl Screen on top of the Bowl, or wrap tin foil around the top of the Bowl

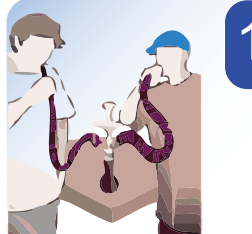

10 Please make sure to poke small holes into the foil if not using a Metal Bowl Screen

11 Place the completed Bowl on top of the Shaft, securing it on to the Bowl Grommet

12 Using the Tongs, light a piece of Charcoal and place it on top of the Metal Bowl Screen / Foil

13 Take a couple puffs to get the Hookah going...Sit back, relax and enjoy

The Flavored Tobacco is never supposed to burn. The Honey, Molasses and Glycerin that are mixed with the Flavored Tobacco are the substances that are being evaporated and smoked. If the Charcoals are placed over a dried out part of the Bowl or the Bowl is completely dry, the smoke may get harsh. If you experience a harsh taste, please check the Bowl as it may be time to fill up the Bowl with Flavored Tobacco again.
